

InstantEMV is the state of the art solution for the instant issuance of EMV multi-application cards at branch offices.

Designed to work with your system,
InstantEMV can be integrated with *any* card management or back office system.

InstantEMV can be used to issue any kind of chip or magnetic stripe card with payment, loyalty, healthcare, ID or e-purse applications in one pass.

It is designed to work with THALES P3 Server which is the worldwide de facto standard for EMV data preparation.

TCP/IP networking standard is used to connect the branches to a central server which communicates with P3 and your CMS to exchange data in both ways to produce customer's card in a few seconds.
